### SEMINAR DESCRIPTION:

Are you a scientist who has never written a line of code before? Or someone who has never really needed to use anything other than Excel? Or perhaps you've applied lines from the internet but would like a better understanding to how to sit down and write?

Look no further than our next HDYDI Seminar – run by Nicole Rogowski, a PhD from the Elling Lab. This one hour is aimed at getting you familiar with useful concepts used in programming in every language.

There will be **no actual coding** as this is meant to be a very gentle introduction to the topic.

- What you can expect to hear about:
- Languages, IDEs, and packages
- Basic types of logic for programming (such as if statements)
- How to pick apart an error
- Where to go for help
